1.3 Exercise 01.C: Logging exercise 1

In the `log4j.properties`, change the level from **INFO** to **DEBUG**, what happens?

We tried to replace INFO to DEBUG, compile and run, nothing significant happens. Same result.

1.5 Exercise 01.E: Inheritance

- Which `m()` method is called in (1)? `m()` method is called from class B
- Is it the expected result? It is.
- Which OOP implementation type fits to that result? (Virtual function overloading) Polymorphism

1.6 Exercise 01.F: `toString()` overloading

- What shows up? Why is the method `toString()` called without being named? `C1 => Circle with center (0,0) and radius 5 (Perimeter is 31.42)` shows up, because the method `toString()` is called by `System.out.println()` method.
- If you rename the method `toString()`, what happens?
`C1 => dblab.hello.Circle@27c170f0`
